Industrial Pre-shipment Inspection

The Objective

For the shipment of industrial products, exporters and importers want to assure that products meet quality standards, as well as agreed technical specifications and quantity specified in the contract. Proof of compliance with these items demands a professional Pre-shipment Inspection by an independent inspection and verification company.

The Solution

Pre-shipment Inspection (PSI) is the inspection of industrial export goods by an independent inspection company. This assures correctness to the agreed quality and quantity, and is conducted in most cases prior to shipment, and in the country of exportation. Pre-shipment Inspection is conducted after the manufacturing of goods has been completed, meaning that the full or partial (random) inspection of the goods can be carried out to check for compliance within contractual specifications.

Why SGS?

SGS Industrial Services is a global service provider for technical verification, inspection and testing, and has the necessary experience, expertise and accreditations to provide Pre-shipment Inspection. SGS experts perform a detailed inspection for exporters/importers of the industrial sector, covering important criteria such as quality, quantity, marking, packing and loading. Our Pre-shipment Inspection offers our customers the certainty that goods arriving to their place of destination are in compliance with the agreements specified in the contract.

With SGS's unique global network, we are able to act as the independent inspection agency that's just around the corner, and do so in virtually every harbor and airport around the world. Our infrastructure and world-wide locations makes it easier for customers to use our provided Pre-shipment Inspection services. Following strict guidelines, SGS assures reliable and accurate inspection work.

Our Services

SGS Industrial Services offers Pre-shipment Inspection for industrial goods in combination with other **Supply Chain Services** to assure that quality is guaranteed.

The Pre-shipment Inspection is concerned with the quality and quantity of the product; which may include following activities:

- **Visual Inspection**
- Dimensional Inspection
- Witness Test
- Documentation Review
- Packing and Marking

Send us your **inquiry on Pre-shipment Inspection** now.

Many countries require that products being imported conform to regional, national, or international safety standards. Proof of conformity to these standards often needs certification by an independent accredited or notified body that can perform the necessary Pre-shipment Inspection. SGS Industrial Services provides these types of **Import Certifications** for various markets, including Russia, Iran and Saudi Arabia, and is the notified body for numerous EU directives.

For Pre-shipment Inspection and Import Certification of other types of goods, please visit **SGS Governments and Institutions Services (GIS)** and **SGS Consumer Testing Services (CTS)**.
